

DATA COLLECTION PLATFORM

Platform Overview

We collect multi-view robotic manipulation data using a teleoperated system. The operator controls the robot via a custom controller, while observations are captured from the robot wrist camera and an external agent view camera.

Key Components

Black Bowl
(Manipulated Object)

Cookie (Left / Right)
(Target Locations)

Drawer Top
(Intermediate Location)

Stove
(Reference Surface)

Dataset Summary

- 5 Tasks (Bowl Placement Tasks)
- 50 Trajectories per Task
- 250 Total Trajectories
- Multi-View Observations (Wrist Camera + Agent View Camera)

Dataset Name

SO101_arm_robot
